

# Assignment 1: Tabular Log

Tuesday, August 22, 2017 3:18 PM

Notes describing the actions done to complete 'Assignment 1 - Establish a Work Environment on Your Computer'.

Date	Event	Notes
21/22 August 2017	Experimented with Visual Studio for Mac	Discovered that Windows Forms (using C#) does not work. Looked into plugins for the issue and could not find any reasonable plugins.
22 August 2017	Boot Camped Mac	It went smoothly.
22 August 2017	Installed Visual Studio Community 2017	It went smoothly.
22 August 2017	Installed GitHub VS extension	It went smoothly.
22 August 2017	Installed SQL Server Management Studio	It went smoothly.
23 August 2017	Start Local Server using SSMS	While doing this I read about a tool called SSDT, which requires more research to fully understand what it does. I also installed SSDT.
23 August 2017	Created a database in SSMS	It went smoothly.
24 August 2017	Created a table in the SSMS database	Note that after creating the table headers, when populating the table with data, the table save on its own.
24 August 2017	Cloned the directory from GitHub	It went smoothly. I noticed a useful button while doing this.
24 August 2017	Tested the app.	The app worked but the database was not yet

2017		ready for it.
24 August 2017	Edited the app.	The app needed to have the connection string changed and the the SQL Commands edited.
24 August 2017	Tested the app.	This time it worked.
24/25 August 2017	Wrote the paper.	It went smoothly.
